

Building and Ductwork Airtightness

Legislative Drivers, New Concerns and New Approaches

The implementation of the EPBD recast puts **increasing pressure** on the market to achieve better building and ductwork airtightness: for most European climates and countries, good airtightness levels are necessary to achieve nearly zero-energy buildings.

You will learn about legislative drivers that have brought to light new concerns and stimulated new initiatives. We will discuss **recent trends in European regulations** as well as field studies supporting the development of competent testing schemes.

Speakers:

Pau Garcia-Audí, Executive Agency for Competitiveness and Innovation

Rémi Carrié, International Network for Information on Ventilation and Energy Performance

Michał Szymański, Poznan University of Technology (Poland)

Valérie Leprince, PLEIAQ (France)

László Fülöp, University of Pécs (Hungary)
